Module 1.5 Project B.A.S.I.C.: Promoting Children’s Success: Helping Children Understand Classroom Schedules and Routines
Presenter’s Script

Slide 1

Slide 2:
1. In this session, we will be focusing on creating quality supportive classroom environments.
2. Well-designed environments support children’s appropriate behaviors and make it less likely that children will need to engage in challenging behavior.
3. In addition, environments can be designed to teach children expectations and to promote their engagement and interactions.

Slide 3:
Why are schedules and routines important?
• Because they are repetitive, schedules and routines help children learn classroom activities.
• Children are able to predict what will happen next and this helps them feel secure and prepared.
• Classrooms with consistent schedules and routines facilitate children’s understanding of the learning environment expectations.
• Children who are familiar with classroom schedules and routines are more likely to be engaged, attentive, and learn new knowledge.

Slide 4:
The terms routines and schedules are often used interchangeably. Schedules represent the big picture. Main activities to be completed daily. Routines represent the steps done to complete the schedule. Rather than assuming that all children will pick up on center routines and schedules, service providers should teach students each activity in the schedule and all of the smaller steps needed to complete routines. Sometimes schedules must be altered due to fire drills, field trips, assemblies, etc.

Slide 5:
1. Talk about how schedules should be designed to promote child engagement. When children are engaged with a material, a peer, or an adult, they are less likely to be engaged in challenging behavior. Some of the things that will keep them engaged are:
   • Balancing the activities so there is a mix of small group and large group activities and a mix of teacher-directed and child-directed activities.
2. Teaching children the routine: We can’t expect children to follow the routine if we don’t teach it to them. Schedules and routines provide some security and a sense of what comes next; children are able to anticipate what will happen, and thus feel more secure. This is especially important for children whose primary language differs from that spoken in the classroom.
3. Be consistent with your schedule and routines. Children will be more likely to learn to follow a schedule if it is implemented consistently.
• Post your schedule visually, and refer to it frequently throughout the day so children learn what will happen next.

4. When changes are necessary, prepare children for those changes. You can prepare children by making announcements at opening circle, using visual prompts on a posted schedule indicating a change (e.g., a stop sign on top of an activity that is not going to happen as planned), and reminding children about the changes as often as possible.
  • For some children with disabilities (e.g., autism), changes in the schedule or routine can be a trigger for challenging behaviors.

Slide 6:
Things to consider when planning the daily schedule:
• Balance of activities—have activities that differ in noise level, pace, person leading (child vs adult), and location (indoor vs. outdoor)
• Number of activities available (variety so all children find something that peaks their interest, but not so many that children play in isolation for long periods of time)
• Number of adults available (for supervision and facilitation of skill development)
• Child’s attention span (high interest materials and activities)
• Child’s level of alertness (some children are more active and alert at certain times of the day)
• Child’s cultural and linguistic background (activities and materials that represent the children in your care)
• Longer play periods result in increased play behaviors (consider how long children have to truly become engaged in an activity)
Consider using the Super Schedules handout with teachers— an activity to help teacher create or modify their classroom schedules

Slide 7:
This is an example of a vertical daily schedule from a classroom in West Des Moines, IA.

Slide 8:
This is another moveable schedule (cards are in clear plastic sleeves) that the teacher can alter as changes become necessary.

Slide 9:
This is another moveable schedule (cards are in clear plastic sleeves) that the teacher can alter as changes become necessary.

Slide 10:
A first-then schedule shows the current activity and what will follow it. This example is on a file folder. The teacher selects the cards and puts them on the velcro strip. She can remove them and place new activities on it as the day progresses.
Routines occur at school and home. This training session will focus on school routines. A story time routine would involve:

- Gathering in a circle on a floor mat
- Sitting like a pretzel
- Listening to teacher read
- Looking at pictures in a storybook
- Answering questions

There could be several series of steps within one routines (i.e., bathroom time includes both toileting and handwashing)

<tr>
<th>Slide 12:</th>
<th>A first-then routine for circle time (all of the activities on the left make up the circle time routine). As with the previous example, the teacher can remove the activities as the circle time routine progresses.</th>
</tr>
</thead>
</table>

| Slide 13: | A routine is slightly different from a schedule:  
- A daily schedule is made up of routines (routine for arrival, for circle time, for snack, for handwashing, etc)  
- This an example of a hand washing routine  
  - Suggest that participants create their routines and then try to complete the activity using only the steps outlined  
  - This will help them note steps they may have missed (as in the above example, no soap is used!) |
| --- | --- |

| Slide 14: | In this routine, children place their names on the slot (which are then moved up) to take a turn on the computer. When the teacher realizes free play or center time is coming to an end, she can place the all done card in a name slot so that no one else can take a turn.  
  - This keeps children from starting their turn as center time is ending. |
